# gitter

Git repository feed reader for Android

Martin Kempf, Reto Bürki, Adrian-Ken Rüegsegger University of Applied Sciences Rapperswil (HSR), Switzerland

4/3/2012 Mobile Operating Systems and Applications

## Outline

# Introduction

- git/gitweb
- Motivation
- Related work

### 2 Architecture

- Design
- Implementation
- Testing

### 3 Discussion

- Summary of achievements
- Lessons learnt
- Future work

# git/gitweb

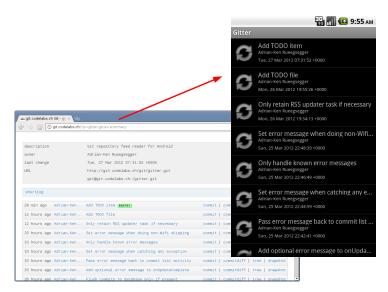

## What is git?

- Git is a free & open source, distributed version control system
- Used by many open source projects
- Initially designed and developed by Linus Torvalds for Linux kernel development

## What is gitweb?

- Web-based Git Repository Browsing (GitWeb)
- Reviewing recent changes in the repository
- Provides RSS feeds for projects / commits

# Scratching The Itch

## Motivation

## Why gitter?

- Know what is happening in your projects
- No existing application available
- We want to use it ourselves

### Goals

- Get informed about new commits
- Inspect commit details / commit diffs
- Respond to commit author

### Related work

#### DESCRIPTION

Agit is a Git client for Android devices. allowing you to checkout the entire history of any Git repository (not just GitHub!) while on the move, review changes and store for full offline access.

#### DESCRIPTION

This application provides access to github. com informations and stay connected with vour networks.

FEATURES

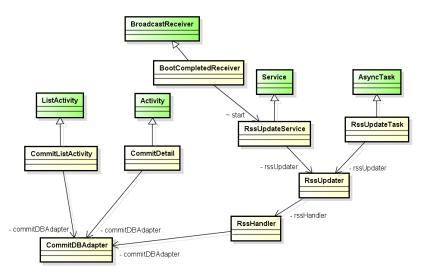

#### DESCRIPTION

The Original & Awesome GitHub Client for Android.

Access GitHub from your Android device! Hubroid was the first full-featured GitHub

# Design

## Implementation

### Details

- Commits are stored in SQLite database (CommitDBAdapter)
- RSS-feed parsing using SAX (RssHandler)
- Activities get commits directly from the DB
- Service fetches new commits in regular intervals (RssUpdateService)
- Service sends notifications using the NotificationManager

# Selected code snippets

### Code review

- Send notifications using NotificationManager
- Send an Email with (pre)filled content

# Testing

### gitter-test

- gitter Android test project
- Unit tests for core functionality
- Not everything is covered (yet)

### Integration testing

- Eat your own dog food
- Use gitter to watch the gitter project repository
- Fix/change what we do not like

# Summary of achievements

## With gitter you can:

- Observe projects managed with git/gitweb
- Receive notifications on new commits
- Configure update behavior
- View detailed commit info
- Direct access to commit diff
- Send feedback to author

## Lessons learnt

- Android is an interesting platform
- Eclipse integration is excellent
- Very easy to get started with mobile development
- Excellent tool support (e.g. device emulator, adb)
- Online resources are very helpful
- Choose your formatter settings at the beginning

## Future work

### TODO

- Improve test coverage
- Implement Pull-to-Refresh
- Filter unread commits / mark all commits as read
- More ways to interact with commit author (e.g. send SMS)
- Submit to market(s) (Google Play, F-Droid)
